Setting up GPS functionality with the MobileDemand xTablet T7200

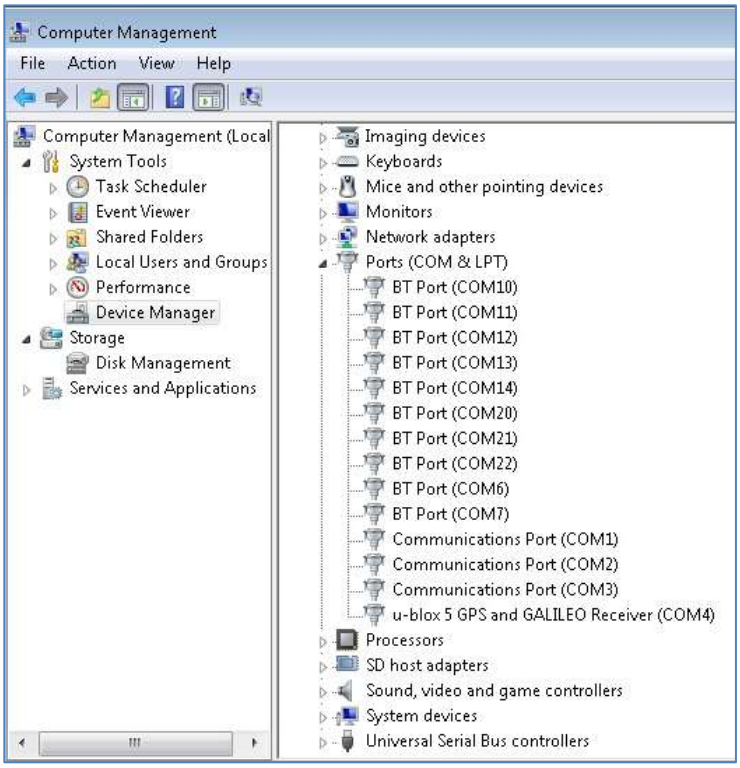
Step 4: Set GPS

Note: The GPS functionality of the xTablet T7200 is utilizing the Ublox-5 GPS module inside the xTablet T7200, and not the GPS functionality of the GOBI 3000 module.

To set up GPS:

1. Verify you have a GPS software on your xTablet T7200
    a. Verify that you have a u-center icon on your desktop or start menu.

2. Verify the Ublox Virtual COM port is listed in the Device Manager



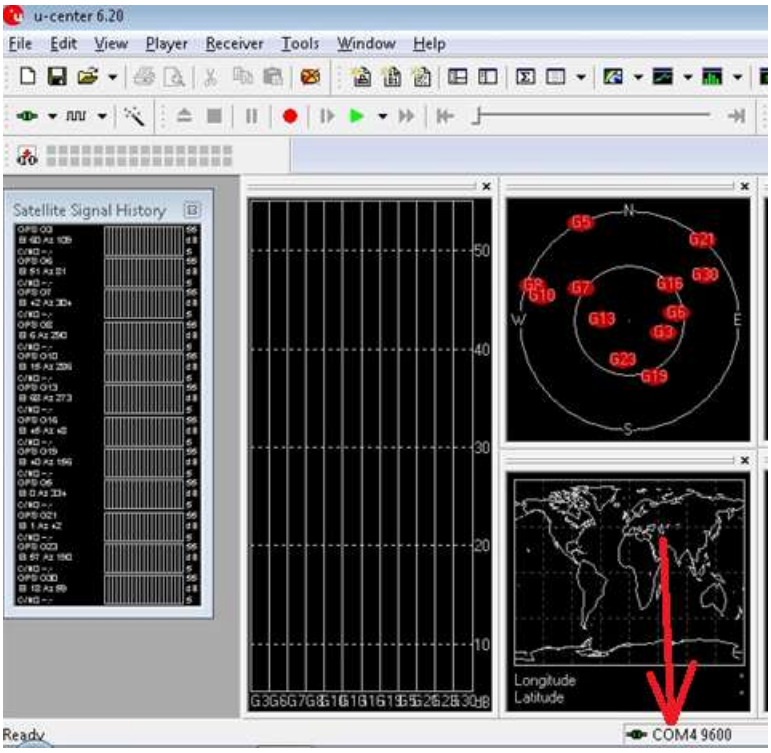
Right click on the Computer Icon, and click Manage

Once in Device Manager, click on Ports (COM & LPT)

Verify that you have an entry for the u-blox 5 GPS and GALILEO Receiver (COM X)

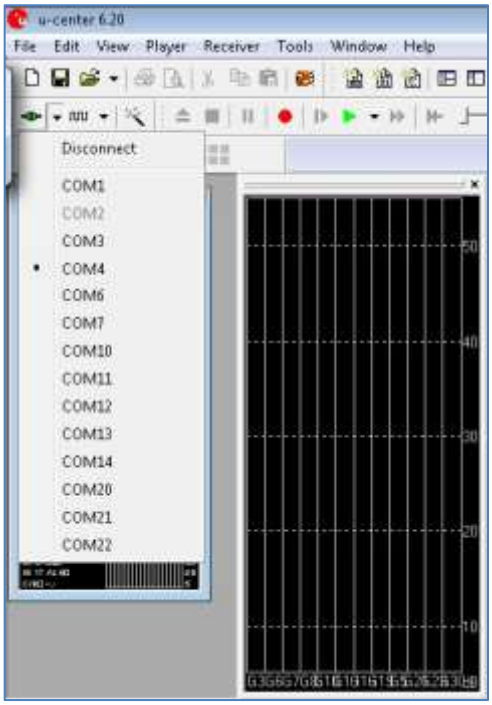
Note the COM Port number.

3. Start the u-center application from the desktop



When the program opens it will communicate with the GPS module, and list the COM port that it is communicating on at the bottom of the screen. Here is a partial screen shot of that program.

If it does not find the GPS, you can check the green button shown below to choose the COM port.



By clicking this green button, you can choose your COM port.

Install a GPS enabled program or your companies GPS program

Our GPS will work with your GPS enabled program like Microsoft MAP, Google Maps, etc.
